

**Save money while saving the planet, one building at a time.**

Interested in saving non-renewable natural resources and reducing energy consumption by as much as 60% on your next building project? NCFI Polyurethane can help. NCFI's high performance spray insulation products, InsulStar and Sealite, reduce overall construction costs because less lumber is required during construction. Also, smaller heating and air conditioning units are needed because our cost-efficient coverage of porous spaces in attics, walls, and under floors stops air infiltration and unwanted moisture. This greatly reduces energy costs and creates a far more comfortable living and working environment.

NCFI Polyurethane is the winner of the EPA's Stratospheric Ozone protection Award, an Energy Star Partner, and a member of the U.S. Green Building Council and the Sustainable Buildings Industry Council. Visit [www.NCFI.com](http://www.NCFI.com), [www.InsulStar.com](http://www.InsulStar.com), or call 1-866-Nsulate to learn how you can *save more than just money*. Go Green with InsulStar.
